

Development

Development Summary

The Employee Onboarding & Offboarding System was developed on the **ServiceNow platform** using low-code/no-code capabilities. The implementation included:

- Created a custom **Employee Lifecycle Management** table.
- Developed **Employee Onboarding & Offboarding** Service Catalog item.
- Configured catalog variables (Employee ID, Employee Name, Department, Manager, Request Type, Joining Date, Exit Date).
- Implemented **Flow Designer** workflow.
- Configured **Manager Approval** process.
- Automated Catalog Task creation for **IT, Facilities, and Security** teams.
- Configured **Service Level Agreement (SLA)** for task tracking.
- Implemented **Role-Based ACLs**.
- Created **Reports and Dashboard** for HR monitoring.
- Tested complete employee lifecycle from request submission to task completion.

Unit Testing

Test Case ID	Module	Expected Result	Actual Result	Status
UT-01	Service Catalog	Catalog item opens successfully	Working as expected	Pass
UT-02	Catalog Variables	All mandatory fields validate correctly	Working as expected	Pass
UT-03	Custom Table	Employee record created successfully	Working as expected	Pass
UT-04	Flow Designer	Flow triggers after request submission	Working as expected	Pass
UT-05	Approval	Manager approval generated	Working as expected	Pass

System Testing

Test Case ID	Scenario	Expected Result	Actual Result	Status
ST-01	Submit onboarding request	Request created	Successful	Pass
ST-02	Manager approval	Approval request generated	Successful	Pass

ST-03	ITTask Creation	ITcatalogtask created	Successful	Pass
ST-04	FacilitiesTaskCreation	Facilities catalog task created	Successful	Pass
ST-05	SecurityTask Creation	Security catalog task created	Successful	Pass
ST-06	SLATracking	SLA attached to catalogtasks	Successful	Pass
ST-07	Dashboard	Dashboard updated withlatestrequest	Successful	Pass
ST-08	Reports	Report displays lifecyclerequest	Successful	Pass

User Acceptance Testing (UAT)

Test Scenario

The HRExecutive submitted an Employee Onboarding request throughthe Service Portal.The systemautomaticallycreated a lifecycle request,routedit for managerapproval,andafterapprovalgenerated tasks for the IT,Facilities, andSecurityteams. Reports anddashboards reflectedtherequest status,andSLAmonitoringtrackedtask completion.

UAT Results

- Employeeerequestsubmittedsuccessfully.
- Managerapprovalworkflowexecutedcorrectly.
- Departmentaltasksgeneratedautomatically.
- SLAtrackingfunctionedcorrectly.
- Reports displayedrequest details.
- Dashboardupdatedwithcurrent request status.
- Overallfunctionalitymettheproject requirements.

FinalUATStatus:PASS
